Lab 3 Hands on Practice on JavaScript CLO-1 GA-4

This lab is just a recap of the concepts that we have studied in the previous lab. The main focus of this lab will be on having more practice on the JavaScript concepts and syntax.

Lab Tasks

Task #1

1. Write biography about yourself and print on console.
2. use 'var' to store your biography in variables, use appropriate primitive types.
3. Create JS Object for your biography key-value pairs. At least 4-5 keys, nested JS Object for Address, DegreePrograms etc
e.g. { name: 'Some Name', age: 34, address: { }, degreeProgram: {} }
Print biography on console (do not print entire object as it is)

Task #2

Get used to with the JS loops and let keyword

By listing the first six prime numbers: 2, 3, 5, 7, 11, and 13, we can see that the prime after 11 is 13.
Write a program, in which you are given any prime Number (hardcode, user input from keyboard is not required). Print the prime number after the given prime number.

Task #3

We can define a function in javascript as:

```
function functionName(arg1, arg2) {

}
```

Write a function that accepts an array of 10 integers (between 0 and 9), that returns a string of those numbers in the form of a phone number.

```
/**
 * Function takes array of numbers and returns
 * @param {array of numbers} numbers
 * @returns string in following format: "(123) 456-7890"
 */
function createPhoneNumber(numbers) {
    // Write your code here
}
```

```
createPhoneNumber([1, 2, 3, 4, 5, 6, 7, 8, 9, 0])
// => returns "(123) 456-7890"
```

Task #4

Create a roundMe() method. roundMe function can work on 0 - N arguments, for multiple arguments, it returns an array of rounded values.
For Example:
roundMe() // returns 0
roundMe(4.7) // returns 5
roundMe(4.7, 4.4) // returns [5, 4]

Task #5

Implement following methods just like in Task 4.

- abs
- ceil
- floor

Task #6

Find the sum of all the multiples of x or y below z.
If we list all the natural numbers below 10 that are multiples of 3 or 5, we get 3, 5, 6 and 9. The sum
of these multiples is 23. (3+5+6+9)
Find the sum of all the multiples of x or y below z.
