AIR UNIVERSITY ISLAMABAD CAMPUS

FULL STACK WEB DEVELOPMENT (CS 301)

FALL 2026 ASSIGNMENT-1

CLO- 1 GA-2

Due Date: October 09, 2026 (11:59 PM)

Marks: 100

Instructions:

1. *Make sure that you read and understand each and every instruction.*
2. *Plagiarism is strongly forbidden and will be very strongly punished. If we find that you have copied from someone else or someone else has copied from you (with or without your knowledge) both of you will be punished. You will be awarded straight zero in this assignment.*
3. *Any resemblance with the UI of Facebook, Twitter, Instagram, Orkut or any other social media platform will result in straight zero.*
4. *It is an individual assignment, so no groups are allowed for this assignment.*
5. *There will be no server calls for this assignment. Assume that requests are being sent and received. You only have to design your application.*
6. *It is must to use Bootstrap or Tailwind or Less to design your application. You cannot use plain CSS until and unless the task is impossible to do with Bootstrap or Tailwind or Less.*
7. *Submit a single '.zip' file for your assignment that will have html pages, css (if any) and javascript files of your application.* ***Rename the submission with your roll number.***

A social networking service is an online platform that people use to build social networks or social relations with other people who share similar personal or career interests, activities, backgrounds or real-life connections. You have been hired by a firm **XYZ** to design the User Interface of their Social Networking site titled as **"ConnecFriend"**. Your task for this assignment is to develop the user interface using **HTML, CSS and JavaScript** with the following features:

- A login page where an existing user can add his username and password and can sign in into the application. **(We assume that all the users have account on the ConnecFriend i.e. you do not want to design the registration page)**
- A profile page where a user can view his/her information that includes personal information, profile picture and the list of all the friends.
- A Home page where the news feeds from all the friends can be seen. When a user logged in, they saw the people in their friends list in the order of their login to the site, the first person being the latest one to do so.
- The news feed includes the news, the friend's name, profile picture, and time since the last log in.
- A person can be invited to be a friend so that one can connect with him/her and share the updates. However, if the person to be added has marked the request sender in ignore list, then the friend request cannot be sent.
- A friend can be rated from scale of 1 to 3 i.e. Stupid, Cool and Trustworthy being represented as icons.
- A user can also share the news with his friends and have the option to share with all friends or with some of friends.
- User also has the option to like or dislike a certain post. Thus, along with all above-mentioned

features, the news also has the count of people who liked or disliked a certain post.

- Private messaging is another solid feature that a social media site should have. Any way you can increase communication amongst your site's users, the better. Thus, the member of the site can send private message to not only the friends but with other members as well.

Grading Rubrics

Rubric	Marks
Login	5
Profile	7
Home Page	10
Invitation	10
Rating of Friend	5
News Sharing	10
Likes or Dislikes with Count	10
Private Messaging	13
Code Quality	10
Error Handling	5
GUI	15
Total	**100**

Good Luck !!! ☺
